

SANDSTONE GOLDEN SAND

Rock Face Random Ashlar Blocks

Golden bursts of colour characterise the veining in this stone. Popping out from a base of sandy, fawn tones, with flecks of grey deposits, it's a sunny/warm option. The protruding shape of this rock face adds a beautiful depth to the texture of this stone.

Natural stone blocks are nominally between 95-110mm thick and typically used like a brick as a construction element.

Please note minimum quantities and extended lead times may apply, contact us for more information.
