

SANDSTONE NEW DESERT SAND

Smooth Coursed 248mm Veneers, nominal 15mm

Born out of the rolling dunes in the desert, this sandstone, with its sandy shades and brown creased veining has a sunny disposition. This versatile stone works well in either traditional or contemporary designs.

This coursed 248mm format is comprised of all 248mm heights, with a roughly equal mix of the 4 random ashlar lengths. It creates a more structured and uniform look than the full random ashlar mix.
