Bluestone Adelaide Light Veneers

Our irregular stones are named in reference to their irregular sizes; they are not cut into a specific format or size. This variation effectively balances linear elements and creates visual movement. They add authenticity, referencing a traditional fieldstone look.

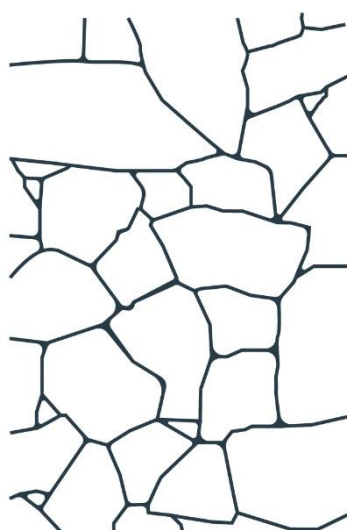

Generally, pointing these stones appears visually softer, with a focus on the variation across the surface face of each piece. Dry stacking, laying without pointing, places focus on the contrasting shadow gap around individual pieces, making the shape of each piece stand out.

RANDOM

RANDOM COURSED

Bluestone Montana Blue Veneers

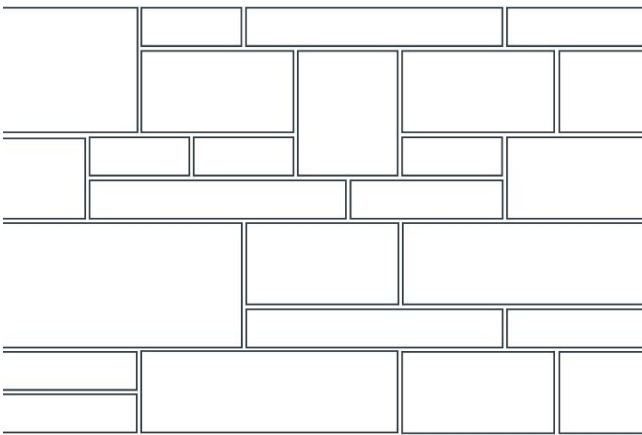

Our random ashlar stone products are predominantly supplied as a mix of 12 sizes. This stone style forms many of our new and character local buildings, so they really feel at home in South Australia. The mix of sizes and textured finishes creates a beautifully crafted result.

These can either be laid in a random ashlar pattern, with the sizes mixed through to create a heritage reference. Alternatively, a coursed ashlar pattern, with the heights aligned in horizontal rows, creates a linear composition which works well in a contemporary build and won't get lost when applied on narrow sections.

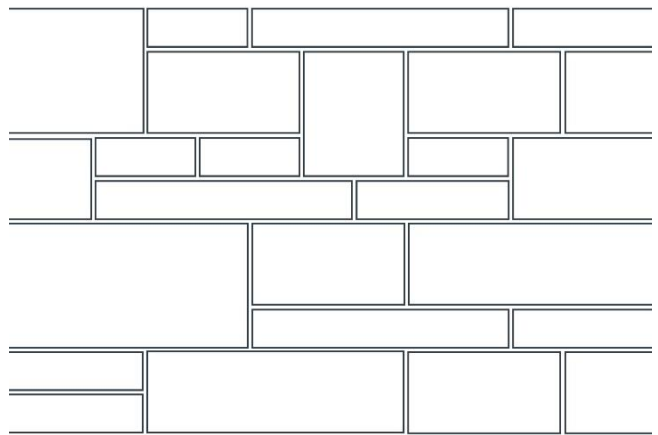

Blocks: are nominally 95-110mm thick, so they can be used as a construction element.

Veneers: also known as stone cladding are thin slices of stone which are glued onto a substrate (commonly bricks).
